

Liège, October 24th, 2013

Dear colleague,

As you are probably already aware, the EFP has decided to create a new type of meeting. The last time the EFP did this we ended up with EuroPerio, so this is a good indicator of meeting quality and originality!! The first of these new format meetings will take place in Paris in celebration of the first Europerio twenty years ago!

This new event aims to gather clinicians willing to update their knowledge in a very clinical field to address a very hot topic. In twenty years, our practice has changed enormously with the osseointegration and the regeneration techniques. Today implantology is part of the daily work of the periodontist.

The First EFP Master Clinic will focus on **“Plastic and reconstructive surgery around implants”**

To comprehensively cover this very clinical topic, we have invited Master Clinicians with internationally acclaimed reputations. To convince us and display their expertise they will use the newest technologies in 3D presentations. Each session will be followed by a debate that will offer delegates the opportunity to share their experience.

We are proud to organize such a meeting **without any support from the Industry**, to avoid any conflict of interest. It is my desire as EFP President to look after our EFP members and this is the reason why the promotion is only made through the national societies. The detailed program is available on the EFP website: www.efp.org and the subscriptions are online. The number of participants will be limited to 500.

The EFP Master Clinic is a new challenge for the EFP to show the leadership of Periodontology in Restorative Dentistry.

I look forward to meet you in Paris.

Michèle RENERS

EFP President
